

Dear Camp Families,

Due to recommendations from the state of Michigan we are requiring campers and staff to be **COVID tested** with a nasal swab prior to attending camp. This must be completed no earlier than one week before camper arrival at Cedar Lodge but we recommend getting as close to camp as possible while still getting the results back prior to coming, this will vary by testing site. The results must be brought to check in. Please practice self quarantine after the test is given until your camper's arrival at camp.

We have included an attachment with recommended testing sites in the Detroit, Chicago and Kalamazoo area that do not require symptoms or a prescription. We have spoken personally with the sites in Detroit and Kalamazoo and all Chicago test sites are open to anyone. If you are having difficulty please contact us. If your camper will be coming for multiple weeks during the summer they do not need to be re-tested unless the end date of one week is more than 14 days from the start of the next week. We do ask that if your camper has a one week break between sessions that you do fill out a symptoms and temperature log for those 7 days. We would also request day campers to fill out a temp and symptom log on the weekend in between their sessions. In the 14 days prior to camp please make sure to have your entire family practice good social distancing, mask wearing and hand hygiene. This is even more important after your camper gets tested for COVID. Being diligent now can help keep the whole camp community safe while your child is at camp.
